

Simplifying GPS Technology

NationsTrack is a leading developer, manufacturer and service provider in the Global Positioning Satellite (GPS) marketplace. GPS technology was developed by the United States Department of Defense for tactical military applications and includes 24 satellites that provide location awareness. Derived from this advanced military and NationsTrack's proven commercial tracking and monitoring technology, which protects commercial fleets and valuable cargo throughout North America, NationsTrack is the evolution of advanced technology made affordable for the consumer.

NationsTrack's coverage encompasses the USA, Mexico, and Canada. The combined power of GPS, the Internet, advanced IT infrastructure, and its accessibility through any standard web browser allows NationsTrack to provide cost effective services throughout most of North America.

NationsTrack's proprietary system integration takes advantage of our expertise in wireless, GPS, and Internet technologies.

NationsTrack

NationsTrack is an innovative consumer service by NationsTrack. Founded in 1998 as Location Systems Technologies, NationsTrack is a pioneer in the development of wireless asset management products and services. The name NationsTrack reflects our commitment to defining and developing the intercept of wireless, location, and Internet technologies.

Vision

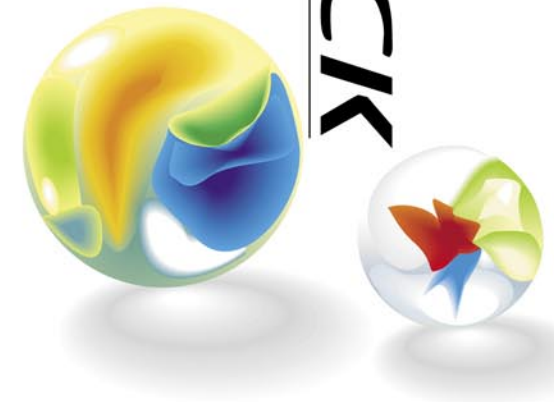

NationsTrack provides wireless vehicle monitoring and tracking services. Our system integrates advanced tracking technologies with terrestrial wireless networks and the Internet. Specializing in highly accurate and near ubiquitous services, accessible worldwide through standard web browsers, NationsTrack makes tracking and monitoring affordable and convenient.

NationsTrack's NationsTrack Internet Vehicle Tracking

NationsTrack products and services allow for proactive notification, real-time control, and historical viewing of status and alarm data, including speed, direction of travel, starter disable, door unlock, and most importantly, location. This information is viewed through the NationsTrack web site, using any standard web browser, which makes access to the system convenient and easy. NationsTrack's technology allows for data retrieval nearly anywhere in the world, including while traveling on business or vacation.

Value Leading Services

Our patent-pending products consist of advanced data compression algorithms, which allow for the transmission of location, speed, direction of travel, or other data, within a single packet. This helps NationsTrack to affordably provide important and valuable information, for a unique, industry-leading service.

Vehicle/Asset Tracking

First and foremost, NationsTrack gives you the power to locate and disable your vehicle throughout North America. It is this control that will enable you to minimize the costs and headaches associated with stolen, vandalized, or speeding vehicles.

NationsTrack Features ... Easy Internet Access

Location, Speed and Direction

- A map on the screen will enable you to zoom in and out on the clearly marked car.

Speed Threshold Violation

- Informs you when, where, and by how much a vehicle speeds.
